SOFTWARE REQUIREMENTS SPECIFICATION

Scholarship Management System for Students

1. Introduction

The Scholarship Management System for Students is a simple website that presents scholarship information in one place. It helps students explore sample scholarship opportunities, review basic eligibility information, and understand the details they may need before applying.

2. Objective

The objective is to design a clear and user-friendly webpage that helps students find scholarship information and view a sample application form.

3. Scope

The webpage includes an introduction, sample scholarship cards, eligibility details, application steps, and a scholarship enquiry form. It is a static front-end demonstration created using HTML and CSS. It does not verify eligibility, submit real applications, or store student information.

4. Functional Requirements

- Display the project title and introductory information.
- Show sample scholarships with names, award amounts, and basic eligibility notes.
- Provide navigation links to the main webpage sections.
- Display simple steps describing a typical scholarship application process.
- Provide a form with student name, email, course, and scholarship interest.
- Display contact and project information in the footer.

5. Non-Functional Requirements

- The webpage should be easy to read and navigate.
- The layout should use consistent colors, spacing, and headings.
- The webpage should work in a modern web browser.
- The HTML and CSS files should be separate, organized, and readable.

Scholarship Management System for Students — SRS

6. Hardware Requirements

A desktop computer or laptop with a keyboard, display, and enough storage to create and view the project files.

7. Software Requirements

HTML5, CSS3, a text editor such as Visual Studio Code or Notepad, and a modern web browser such as Google Chrome or Microsoft Edge.

8. Expected Output

A styled webpage showing sample scholarship opportunities, basic eligibility details, application steps, a student enquiry form, and footer information.

9. Limitations

This project is a static prototype. Scholarship details are examples and may not represent current real-world schemes. The form does not send or save information. A complete system would require a backend, database, secure handling of student data, and verified scholarship information.

10. References

1. Fundamentals of Full Stack — Mini Project Guide supplied for this assignment.
2. HTML5 and CSS3 elements used for the front-end demonstration.

11. Conclusion

The project demonstrates how a simple website can organize scholarship information and make it easier for students to understand available opportunities. It can be extended in the future into a complete scholarship application system.
